About 90 babies die each year in New York State from sleep-related causes. Right from the start, help your baby sleep safely every time sleep begins.

**ALONE**
- Put baby on their back to sleep – even if baby was born early (premature).
- Your baby should not sleep with adults or other children.
- Share your room, not your bed. Room-sharing lets you keep a close watch over your baby while preventing accidents that might happen when baby is sleeping in an adult bed.
- Nothing should be in the crib except baby; no pillows, bumper pads, blankets or toys.

**CRIB**
- Use a safety-approved* crib/bassinet/playard with a firm mattress and a fitted sheet.
- If baby falls asleep on a bed, couch, armchair, or in a sling, swing or other carrier, put baby in a crib to finish sleeping.

*For crib safety, go to the Consumer Product Safety Commission:

**BACK**
- Put baby to sleep on their back, not on their tummy or side.
- Do put your baby on their tummy every day when baby is awake and being watched. “Tummy time” helps baby develop strong shoulder and neck muscles.
Other Tips

TIPS

• Use a one-piece sleeper. Don’t use blankets.

• Be sure baby is not too warm.

• Breastfeed your baby.

• Try using a pacifier for sleep but don’t force baby to take it.

• Get your baby immunized.

• If your baby is in a front or back baby carrier, be sure that baby’s face is always visible.

• Never use a car seat, baby swing, carriage or other carrier without properly fastening all the straps. Babies have been caught in partially fastened straps and died.

• Make sure no one smokes in your home or around your baby.

• Don’t use alcohol or drugs.

• Don’t rely on home baby monitors.

Make sure everyone caring for your baby follows these tips!
