

2016

COMMUNITY HEALTH NEEDS ASSESSMENT

EXECUTIVE SUMMARY

Community Health Needs Assessment, 2016 Update

Purpose of the Community Health Needs Assessment

This 2016 Community Health Needs Assessment (CHNA) updates the CHNA completed in 2013 to meet the requirements of Section 9007 of the 2010 federal law, The Affordable Care Act (“ACA”). The ACA requires that any tax-exempt, IRS-designated 501(c) (3) hospital complete or update a publicly-available, comprehensive CHNA every three years in order to document the extent to which it understands the unique characteristics and needs of the local communities it serves, and responds to these needs by delivering meaningful and effective community benefit through clinical services and other programming.

Required Components

A CHNA report has five required components:

- 1) Definition of community served
- 2) A prioritized description of the significant health needs of the community
- 3) Transparency in the process and methods used to conduct the CHNA, including how it took into account input from the community served and prioritized community health needs
- 4) A description of the resources potentially available to address the identified significant prioritized community health needs
- 5) An evaluation of the impact of actions taken to address the significant health needs identified in the previous CHNA report (June 2013).

A CHNA report is considered complete when it is adopted by a governing body of the facility and made widely available to the public.

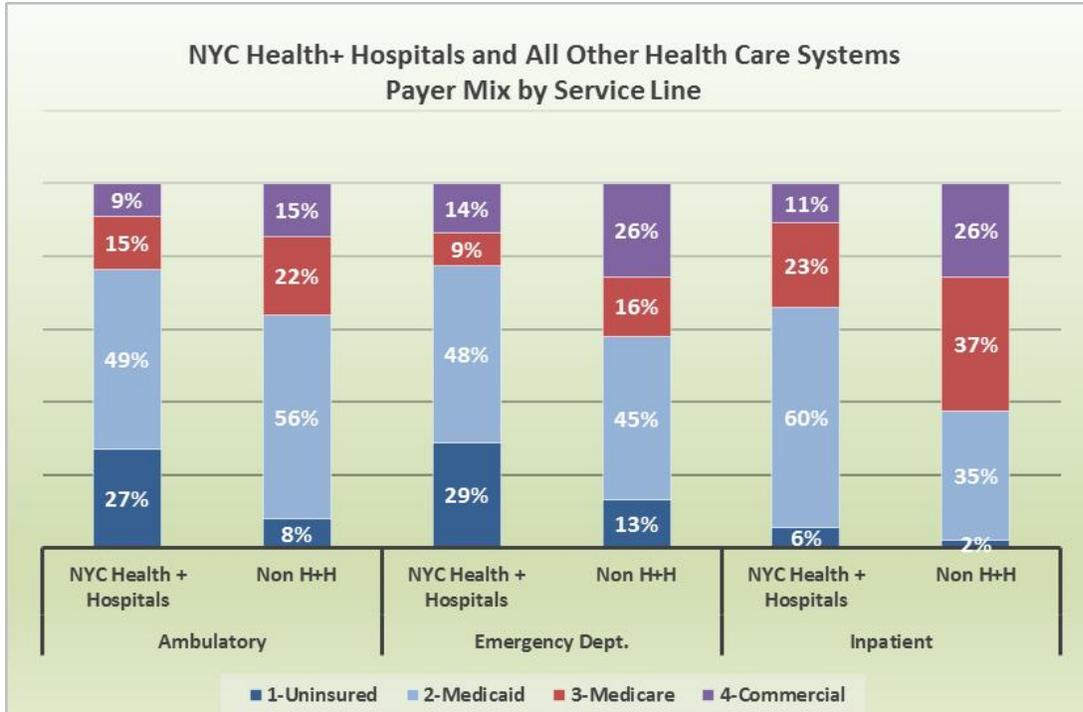

Community Served

NYC Health + Hospitals serve all New Yorkers in every neighborhood in New York City regardless of their ability to pay. Addressing disparity throughout New York City, NYC Health + Hospitals is *the* safety-net for the uninsured and underserved in New York City.

As a share of its total volume, NYC Health + Hospitals provides three times greater share of ambulatory care to the uninsured than other New York City hospitals (27% and 8%, respectively) and twice as many ED visits (29% and 13%, respectively). Medicaid

and uninsured patients together account for nearly twice as many hospital stays compared to other New York City hospitals (66% and 37%, respectively) (chart 1).

Chart 1: NYC Health + Hospitals Payer Mix by Service

Sources and notes: 2014 Hospital Institutional Cost Report, 2014 DTC Cost Report for HHC using internal data, and 2013 Health Center Cost Report for all other DTCs. Includes all NYC acute, general care hospitals and related wholly owned or controlled community health centers, including HHC DTCs. Discharges exclude normal newborns. ED visits include treat and release, and visits that result in admission. Clinic visits include comprehensive care and primary care visits only.

The service area of individual hospitals in the NYC Health + Hospitals System are identified in Appendix 1. A description of these communities, including demographic characteristics identifying vulnerable populations such as disabled and residency status; and health status such as chronic disease prevalence and the rate of potentially avoidable emergency health care use, is in Appendix 2.

Process and Methods

The process and methods was designed collaboratively by a work group of facility planning directors and other representatives.

The community served by each acute care facility is defined as the geographic area in which 75% of its ambulatory care patients reside. An initial list of over 40 health needs were identified based on a review of published literature and internal analyses that have been made publically available including the 2013 CHNA and the DSRIP Community Needs Assessment. Incorporating input from other facility representatives and pilot

tested with hospital users, this list was refined to 13 community health needs. Input from facility users (approximately 150 per facility were surveyed), Community Advisory Boards, facility leadership, and the prevalence of these health needs within the community were blended together to prioritize the health needs. The five highest priority community needs were considered *significant*.

Prioritized Significant Community Health Needs

All 13 identified community health needs were identified as important within the hospitals' communities according to community input. Those considered most significant and their priority order in accordance with regulatory requirements are indicated in blue in the table below. Hypertension/high blood pressure and diabetes are significant community health needs at all hospitals; obesity and heart disease are significant at the majority of hospitals (Chart 2).

Chart 2: Community Health Need by Hospital

	Bellevue	Carter	Coney Island	Elmhurst	Harlem	Jacobi	Kings County	Lincoln	Metro-politan	NCB	Queens	Woodhull
Hypertension/ High Blood Pressure	1	1 (tie)	4	2	1	1	2	1	2	2 (tie)	2	1

Comparison of 2013 and 2016 Significant Community Health Needs

Most of the significant community health needs identified in 2013 were again identified in 2016. In both 2013 and 2016, a large number of hospitals identified diabetes, hypertension/high blood pressure, heart disease, obesity, mental illness and asthma as a significant community health need.

HIV/AIDS and other infectious diseases were considered a significant community health need at five hospitals in 2013, but none considered it among their most significant in 2016. A decrease in importance is consistent with the continued progress in reducing HIV/AIDS diagnoses and deaths in NYC.

Other changes in health needs between 2013 and 2016 are partly attributable to changes in federal requirements regarding methodology (see Process and Methods).

Significant Community Health Needs Identified in 2016 and 2013

	Significant Community Health Needs	
	Number of Hospitals Identified in 2016	Number of Hospitals Identified in 2013
Diabetes	12	12
Hypertension / High Blood Pressure	12	10
Heart Disease, High Cholesterol, Stroke	9	10
Obesity	8	8
Mental illness	6	10
Asthma and other Breathing Issues	5	5
Alcohol and/or Drug Use	3	9
Cancer	3	6
Smoking	3	1
Dementia	1	1
HIV/AIDS, Hepatitis, STDs	0	5
Violence	0	2
Premature Births, Low Birth Weight	0	1

Resources Potentially Available

Appendix 4 is a listing of health and social service organizations available to members of low-income, medically underserved, and other minority populations in the neighborhoods included in the primary service area of NYC Health + Hospitals, by borough and sorted by neighborhood. These populations may experience health disparity or are at risk of not receiving medical care as a result of being uninsured or underinsured or due to geographic, language, financial, immigration status, or other barriers. Organization services provided are arranged accordingly into the following categories: Dental, Vision, Adult Day Health, Health center, Insurance enrollment, Home Health, Hospital, Nursing Home, Prescription Drug, Immigration Support, Mental Health-Inpatient, Mental Health-Ambulatory, Substance Use, Social Services, Financial Assistance, and Wellness/Prevention.

Evaluation of 2013 Implementation Plan

NYC Health + Hospitals evaluated each hospital's 2013 Implementation Plan and the impact of specific interventions that addressed identified health care needs (Appendix 3). Included in the evaluation is a list of the significant health needs identified in 2013, a description of the planned activities that addressed each of the health needs, an indication whether the planned activity was implemented, the target population and goal of the activity, and the impact or outcome of the activity.

2016 Implementation Strategy

The 2016 CHNA Implementation Strategy due in November 2016 will be designed to address the prioritized significant community health needs identified in the 2016 CHNA and must be adopted by the hospital's governing body.

PROCESS AND METHODS

Community Served

Each hospital's primary and secondary service area is defined as the zip codes that comprise the residence of 50%, 75% of its ambulatory patients, respectively.

Community Input

Community input was obtained using three different strategies:

1) Community Advisory Board

Community Advisory Boards (CAB) are the formal and direct links between each NYC Health + Hospitals facility and its patients and local advocates. The CAB members, consisting of residents, patients and community workers, represent the views of the community in the health care facility's decision making-process to ensure access to the best possible medical care in their communities. The CAB members provide vital insight on the development of facility plans and programs, as well as keep the community informed of NYC Health + Hospitals' goals and objectives. All hospitals in the NYC Health + Hospitals system have a CAB which meets on a regular basis.

The CHNA report and process was presented to each CAB individually. A survey was administered anonymously and confidentially to each CAB member which asked them to indicate the relative importance of each of the 13 identified community health needs in their community (see survey instrument in appendix 6). These responses were coded for inclusion in the prioritization matrix. CAB members were also asked to provide additional input beyond the survey question.

2) Facility Users

NYC Health + Hospitals engaged approximately 150 adult facility users from each hospital throughout the main facility and within community-based clinic sites. These individuals completed a survey anonymously and confidentially with questions focused on demographics, health insurance status, language preferences, health concerns, primary and preventive health care utilization, barriers in obtaining ambulatory care and reasons for use of emergency care. Respondents were also asked to indicate the relative importance of each of the 13 identified community health needs in their community. These responses were coded for inclusion in the prioritization matrix.

Surveys were self-administered or administered by facility staff. The surveys were translated into NYC Health + Hospitals' top 7 languages: Bengali, Chinese (simplified),

Haitian-Creole, French, Polish, Russian and Spanish. Participants received a two-trip Metrocard valued at \$5.50 for completing the survey (see survey instrument in Appendix 5).

3) Additional Community Engagement

NYC Health + Hospitals completed a community needs assessment in December 2014 as a requirement to participate in the Delivery System Reform Incentive Payment (DSRIP) program, a statewide initiative that focuses on improving health care delivery promoting community-level collaborations to ensure that Medicaid and uninsured populations receive culturally competent, highly integrated, well-coordinated, and easily accessible health services. As part of this needs assessment, the system collaborated with government agencies, numerous community organizations, engaged experts in the community and conducted focus groups with vulnerable populations. Key informant interviews were conducted with community experts having population-specific expertise, including particular immigrant groups, older adults, children and adolescents or expertise in specific issues, including supportive housing, care coordination, corrections, and homelessness (conducted as part of the NYC Health + Hospitals DSRIP Community Needs Assessment). Focus groups were conducted with community members recruited by community organizations which included targeted vulnerable groups such as older adults, local immigrant groups, LGBTQ and individuals with disabilities.

Additional Resources

4) Facility Leadership

Hospital leadership were engaged to support the initial identification of potential community health needs, and refine the list to 13 needs which were used in hospital user and CAB member surveys. In addition, a survey was administered to hospital leaders which asked them to indicate the relative importance of each of the 13 identified community health needs in their service area (see survey instrument in Appendix 6). Finally, hospital leaders were asked to review the list of significant health needs identified by the CHNA process.

5) Publically available community health, socio-demographic, economic data

The CHNA work group reviewed all publically available data and supplemented with review of public health literature prepared by New York City of Department of Health and Mental Hygiene (including Take Care New York 2020); New York State Department of Health (including NYS Prevention Agenda 2013-2018); federal agencies, Centers for

Disease Control and Prevention and Healthy People 2020. Sources of Data and Brief Description include:

- American Academy of Family Physicians UDS Mapper
 - UDS Mapper provides ZIP code-level age-adjusted mortality estimates and prevalence estimates on health care access and chronic condition. Can be accessed at: <http://www.udsmapper.org/>.
- Emory University Rollins School of Public Health AIDS Vu
 - AIDS Vu provides ZIP code-level incidence and prevalence data on HIV/AIDS as of 2012. Can be accessed at: <http://aidsvu.org/>.
- New York State Department of Health Cancer Registry
 - The NYS Cancer Registry provides ZIP code-level age-adjusted estimates on incidence of the top malignant cancers (colorectal, female breast, lung and bronchus and prostate) as of 2008-2012. Can be accessed at: <https://www.health.ny.gov/statistics/cancer/registry/zipcode/index.htm>.
- New York State Department of Health DSRIP Performance data
 - The New York State Department of Health provides key statistics on the health care utilization and health status of Medicaid beneficiaries in calendar year 2012. Can be accessed at: https://www.health.ny.gov/health_care/medicaid/redesign/dsrip/performance_data/.
- New York State Department of Health Vital Statistics
 - NYS Vital Statistics provides ZIP-code level key perinatal statistics including access to prenatal care and birth outcomes as of 2011-2013. Can be accessed at: <http://www.health.ny.gov/statistics/chac/perinatal/county/2011-2013/>.
- New York Department of Health and Mental Hygiene (DOHMH) Community Health Survey (CHS)
 - CHS is a telephone survey conducted annually by DOHMH and provides data on the health of New Yorkers, including prevalence estimates on a broad range of chronic condition, health care utilization and other behavioral risk factors. 2010 through 2014 data are used in this report. Can be accessed at: <https://a816-healthpsi.nyc.gov/epiquery/CHS/CHSXIndex.html>.
- New York Department of Health and Mental Hygiene Vital Statistics
 - DOHMH vital statistics data provides 2013 age-adjusted mortality data by cause and by neighborhood. Can be accessed at <https://a816-healthpsi.nyc.gov/epiquery/VS/index.html>.
- United States Census American Community Survey (ACS) 5-year estimates

- ACS provides ZIP code-level demographic, economic, social and housing data as of 2008-2012, and 2010-2014. Can be accessed at: <http://factfinder.census.gov/faces/nav/jsf/pages/index.xhtml>.

Process and Criteria to Identify Health Needs

A work group composed of central office corporate planning staff, facility planning directors and other facility representatives from all hospitals in the NYC Health + Hospitals system was formed in April 2015 and met monthly to coordinate and conduct the CHNA process. To identify community health needs, the work group reviewed documentation from city, state and federal public health resources, including but not limited to Take Care New York 2020, New York State Prevention Agenda 2013-2018 and Healthy People 2020. The work group also reviewed facility 2013 CHNA and NYC Health + Hospitals DSRIP Community Needs Assessment reports. From this literature review, a list of over 40 potential community health needs were identified. To refine the list, the work group solicited input from other facility representatives and pilot tested the list with hospital users using a survey. The result of this process identified 13 community health needs as indicated below (note: this is not in priority order):

1. Heart disease, high cholesterol, stroke
2. Cancer
3. Diabetes
4. Asthma and other breathing issues
5. Hypertension/ high blood pressure
6. Violence
7. Mental illness and psychiatric disorders
8. Dementia including Alzheimer's
9. Obesity
10. Premature births, low birth weight
11. HIV, Hepatitis, STDs
12. Alcohol and/or drug use
13. Smoking

Prioritization of Community Health Needs

Hospitals developed their facility specific community health needs prioritization by ranking the community needs as determined by facility users, CAB members, hospital leaders, and the prevalence of the conditions within their respective communities – independently - to create an overall blended rank score of each community health need.

Facility users, CAB members, and hospital leaders completed a survey which asked them to rate each of the community health needs using the criteria: “Very Serious” = 3; “Somewhat Serious” = 2; “Not Serious” = 1. The option, “Don’t Know/Not Applicable” was also provided and were excluded for that health need score.

Condition prevalence within the hospital service area was also a considered in prioritizing the community health needs. A ‘z’ score, which represents the distance/variance between the raw score (service area average) and the population mean (citywide average) in units of the standard deviation was calculated for each condition prevalence. A positive number suggests that service area experiences more prevalence in the area than the rest of the city, while a negative number suggest that there is less prevalence in the area relative to other NYC neighborhoods.

Each of the community health needs were assigned a rank from 1 to 13 by each of the three groups – hospital users, CAB members, and hospital leaders – based on their survey results. Community health needs were also assigned a rank from 1 to 13 based on their prevalence, using ‘z’ scores. Finally, each of the four ranks (Users, CAB members, hospital leaders, and prevalence) were added together and health issues were re-ranked based on their overall score.

Community health needs that were considered *significant* were ranked among the top five of identified needs. The final list, including the identified significant community health needs, were reviewed by hospital leadership.

APPROVAL

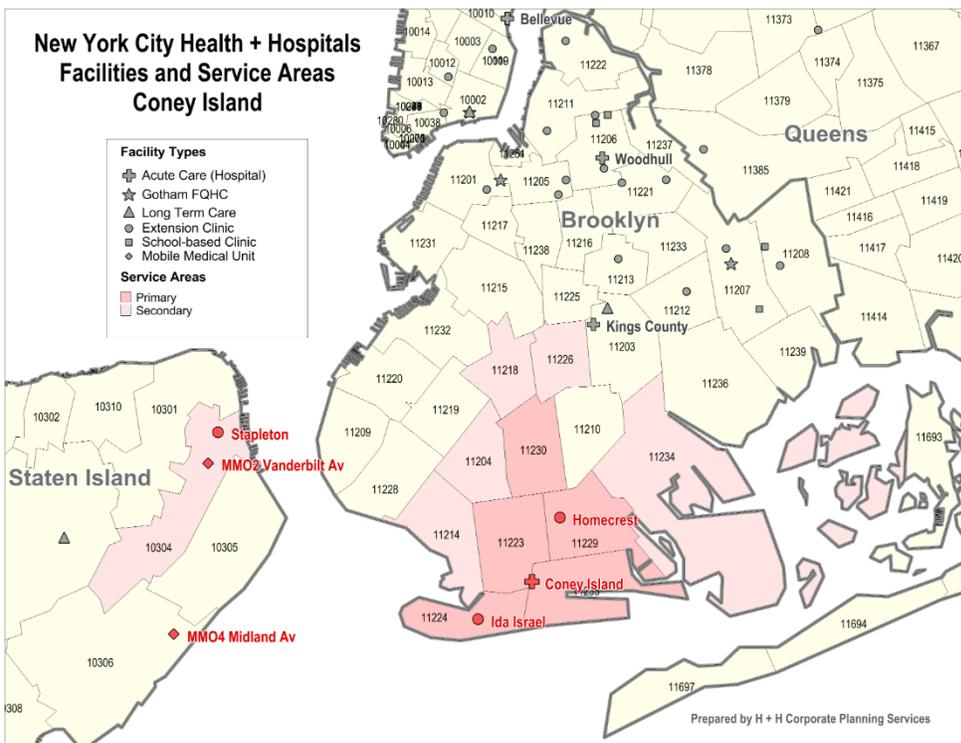

The Community Health Needs Assessment, 2016 Update, was adopted by the Board of Directors of NYC Health + Hospitals on June 30, 2016.

Written comments may be submitted via email to: chna@nychhc.org

Appendix 1: Description of NYC Health + Hospitals / Coney Island and Community Served

Located in Coney Island-Sheepshead Bay at 2601 Ocean Parkway in Zip code 11235, NYC Health + Hospitals / Coney Island's primary service area consists of the neighborhoods Coney Island, Seagate, at the tip of the Coney Island peninsula, Brighton Beach, Manhattan Beach, Sheepshead Bay, Gravesend, and Midwood/East Midwood. Its secondary service area consists of Bensonhurst and Bath Beach, Kensington, Borough Park, Parkville, Flatbush/East Flatbush, and Flatlands/ Mill Basin/ Bergen Beach. NYC Health + Hospitals / Coney Island's service area also includes Stapleton/St. George in Staten Island.

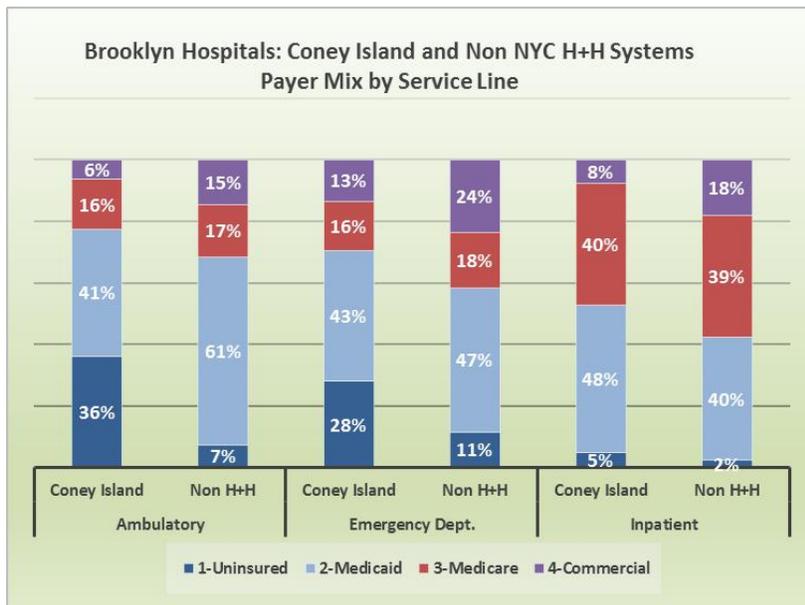

The map below shows the primary service area in red and the secondary service area in light red. Coney Island sites are labeled in red, and other NYC Health + Hospitals sites are identified in gray.¹ The NYC Health + Hospitals / Coney Island service area encompasses many neighborhoods that the federal Health Resources and Services Administration (HRSA) has identified as being medically underserved and/or or having a shortage of health providers (HPSA).² NYC Health + Hospitals / Coney Island is specifically located in special population (Medicaid) Dental Health, Mental Health and Primary Care HPSAs.

¹ Primary and secondary service area is defined as the zip codes that comprise the residence of 50% and 75% of its ambulatory patients, respectively. CIH's primary and secondary service area includes the zip codes 10304, 11204, 11214, 11218, 11223, 11224, 11226, 11229, 11230, 11234, and 11235.

² A Medically Underserved Area /Population (MUA/P) designation applies to a neighborhood or collection of census tracts based on four factors: the ratio of primary medical care physicians per 1,000 population, infant mortality rate, percentage of the population with incomes below the poverty level, and percentage of the population age 65 or over. A Healthcare Provider Shortage Area (HPSA) is a collection of census tracts that has been designated as having a shortage of health professionals. There are three categories of HPSAs: primary care (shortage of primary care clinicians), dental (shortage of oral health professionals), and mental health (shortage of mental health professionals).

NYC Health + Hospitals / Coney Island provides a disproportionate share of services for the borough's low income and uninsured population. In 2014, 36% of its ambulatory visits, and 28% of its ED visits were uninsured compared to 7% and 11% at Voluntary and State hospitals in Brooklyn. In addition, 53% of its inpatient discharges were either uninsured or enrolled in Medicaid, compared to 42% at Brooklyn Voluntary and state hospitals.

Sources and Notes: 2014 Hospital Institutional Cost Report, 2014 DTC Cost Report for HHC using internal data, and 2013 Health Center Cost Report for all other DTCs. Includes all NYC acute, general care hospitals and related wholly owned or controlled community health centers, including HHC DTCs. Discharges exclude normal newborns. ED visits include treat and release, and visits that result in admission. Clinic visits include comprehensive care and primary care visits only.

Facility Size and Patient Volume

With 79,689 patients and 362,808 encounters (FY 2015), NYC Health + Hospitals / Coney Island is a large, full service hospital with 377 certified beds. In FY 2015, it had more than 16,000 discharges including more than 1,000 newborn deliveries, 112,000 Emergency Department visits, and 260,000 ambulatory visits.

Inpatient Services

Potentially Preventable Visits (PPVs), based on proprietary 3M software, are emergency visits for ambulatory care sensitive conditions (ACSC) that may result from a lack of adequate access to care or ambulatory care coordination. These ambulatory sensitive conditions could be reduced or eliminated with adequate patient monitoring and follow up. Unlike with PQIs, which can be disease specific, there is only one PPV indicator which represents all potentially avoidable ED visit regardless of condition or disease.

PPV Events are observed or "actual" ED visits that meet the criteria of an ACSC visit as defined by the 3M software. The Observed Rate is the number of PPV events divided by the population. Risk Adjusted Expected Visits are PPV visits adjusted by age, gender and race/ethnicity. The Expected rate is the number of Expected visits divided by the population. Risk Adjusted Expected Rate is the observed PPV rate divided by the expected PPV rate, multiplied by the statewide PPV rate. A lower number is better.

* Preterm Births –prior to 37 weeks of gestation; Low Birth Weight– weight between 100-2499 grams; Late or No Prenatal care– initiated during the third trimester of pregnancy or not at all; Teen Birth – Births to females ages 15-19; Infant Deaths –occurred at less than twelve months of age; Neonatal Deaths –occurred at less than 28 days of age. Total Births are over three year time period.

Appendix 3. Evaluation of 2013 Implementation Plan

Significant Health Need Identified in 2013 CHNA	Planned Activities Listed in the 2013 Implementation Strategy	Was the Activity Implemented? (Yes/No)	Result or Impact	Supporting Data and Data Sources
Diabetes	Coordinate Care and Patient Education through Diabetes Registry	Yes		<p>Program Description A Registered Nurse Coordinator follows up with any patient with an HbA1c of 8 or over for the purpose of coordinating follow up care and patient education. The registry provides outcome information which is included in "report cards" for the patient's physician.</p> <p>Program Goal Increase the number of diabetes patients in the Registry.</p> <p>Action Plan Continue the follow up of all patients with an HbA1c of 8 or over.</p> <p>Outcome At the present time, there are some 4,283 patients in the Diabetes Registry. The percentage of patients with HbA1c levels below 8 increased from 35% to 66%. between June 2015 and March 2016. See further information in "Educate Patients About Their Disease through Project RED (Re-Engineering Discharge) Program and Diabetes Support Proactive Care and Improve Self-Management Skills through Chronic Disease Collaborative, below.</p>
Diabetes	Provide Diabetes Management and Education through Frequent Classes and Specialized Clinic Sessions	Yes		<p>Program Description Patients learn how to control obesity and prevent complications from diabetes. Patients with diabetes can take advantage of frequent classes staffed by bi-lingual instructors, who can best address culturally influenced health beliefs, attitudes and practices.</p> <p>Program Goal Obtain certification as a Diabetes Center and develop expanded program with extensive inpatient and outpatient components.</p> <p>Action Plan Utilize three (3) staff Diabetes educators to follow patients from the ER through the inpatient and post-discharge periods</p> <p>Outcome Diabetes patients continue to be followed and educated throughout their pre-hospital, inpatient and ambulatory care periods. Education has been expanded to the Hospital's off-site facilities. Monthly sessions with relevant specialists in diabetes care are held monthly at the Hospital for the greater southern Brooklyn community.</p>
Diabetes	Educate Patients About Their Disease through Project RED (Re-Engineering Discharge) Program	Yes		<p>Program Description Under Project RED, inpatient patients are educated about their diseases, beginning with their hospital stay (in addition to Diabetes, there are Case Managers for CHF, Myocardial Infarctions/Pneumonia and COPD/Asthma). An RN case manager meets with the patient and family, evaluates their understanding of diabetes and educates the patient about the disease, the medications and the importance of following the plan set by the physician. The first post-hospital contact is made within the first two days after discharge. The program continues until the patient has made his/her first post-discharge visit to the primary care physician.</p> <p>Program Goal Provide the tools for diabetic patients to optimally manage their condition, utilizing the resources of Hospital staff at all locations, both within and outside the Hospital.</p> <p>Action Plan Under the care of a Diabetes Care Manager, optimally manage the patient's diabetes. Continue to provide direct care by the Care Manager through 30-days post-discharge.</p> <p>Outcome As noted above, there are almost 4,300 persons in the Diabetes Registry.</p>
Diabetes	Support Proactive Care and Improve Self-Management Skills through Chronic Disease Collaborative	Yes		<p>Program Description This collaborative, together with other NYC H + H facilities, focuses on using a dynamic group process to identify "best practices" and redesign systems to improve care and clinical outcomes for patients with diabetes (other Collaboratives are in Heart Failure, Depression and Pediatric Asthma). The Collaboratives are outpatient-based and focus on improving the control of risk factors and uses data and information systems to support proactive care and improve self-management skills.</p> <p>Program Goal The long term goal is to maximize the length and quality of life for people with chronic diseases.</p> <p>Outcome</p>

Significant Health Need Identified in 2013 CHNA	Planned Activities Listed in the 2013 Implementation Strategy	Was the Activity Implemented? (Yes/No)	Result or Impact	Supporting Data and Data Sources
				There are almost 4,300 Diabetic patients in our registry and some 65% of their conditions are controlled, i.e., HbA1c less than 8.
Cardiovascular Disease	Establish a Care Plan with Patient through Collaborative Care Model for Congestive Heart Disease and Hypertension Control	Yes	<p>This Collaborative has been ongoing since 2014. The team includes the Primary Care Provider, consulting specialists and a CHF Care Manager, who establish a plan for regular, ongoing clinical care and at-home monitoring and lifestyle modification goals in order to effectively manage these chronic conditions.</p> <p>Program Goal The goal of this collaborative is to manage, on an outpatient basis, CHF and hypertensive patients to Blood Pressure (BP) reading of 139/79 and lower. Those who are above these levels are cared for in the Treat to Target program.</p> <p>Action Plan Provide the professional assistance so that CHF patients will be able to manage themselves, utilizing techniques such diet, exercise and ongoing monitoring.</p> <p>Outcome The percentage of patients with LDL's below 100 rose from 31% to 43%, and patients with controlled blood pressure, i.e., <=139/79, rose from 55% to 59% from June 2015 to March 2016.</p>	
Cardiovascular Disease	Educate Patients About Their Disease through Project RED (Re-Engineering Discharge) Program	Yes	<p>As with Diabetes, above, under Project RED, which is inpatient-based, patients are educated about their diseases, beginning with their hospital stay and continuing through 30- days post-discharge. It continues on an ambulatory basis and is administered by a CHF case manager. The RN case manager, meets with the patient and family, evaluates their understanding of cardiovascular disease and educates the patient about the disease, the medications and the importance of following the plan set by the physician. The first post-Hospital contact is within the first two-three days after discharge. The process continues until the patient has made his/her first post-discharge visit to the primary care physician.</p> <p>Program Goal Provide the tools for CHF patients to optimally manage their condition, utilizing the resources of Hospital staff at all locations, both within and outside the Hospital.</p> <p>Action Plan Under the care of the CHF Care Manager, optimally manage the patient's cardiac condition. Continue to provide direct care by the Care Manager through 30-days post-discharge.</p> <p>Outcome There are approximately 6,900 persons in the CHF Registry</p>	
Behavioral Health Issues	Consolidate and Expand Access to Outpatient Substance Abuse Services to be Located at the Former Ida Israel Site	Yes	<p>Program Description Due to Superstorm Sandy-related destruction of the Hospital's outpatient substance abuse facility, all programs are to be consolidated in a new community site with an expanded scope of services. Further, our Substance Abuse Programs are to be designed so as to better address the issues of alcoholism, abuse and suicide attempts.</p> <p>Program Goal Re-establish the substance abuse and related programs formerly located at the Ida G Israel Community Health Center (CHC) in its new, nearby facility within the same southern Brooklyn shorefront area. Design the program to address the issues of alcoholism, abuse and suicide attempts.</p> <p>Action Plan The new Ida G Israel site was opened in September 2015 and Substance Abuse services were transferred from the Hospital, where they had been provided since Superstorm Sandy.</p> <p>Outcome Substance Abuse visits were 8, 847, FYTD (July 2015 to February 2016).</p>	
Behavioral Health Issues	Redesign Psychiatry and Substance Abuse Programs to Programmatically Address Issues of Alcoholism, Abuse and Suicide Attempts			
Asthma	Assure 24-hour Access to Physician Specialist through Pediatric Asthma Program	Yes	<p>Program Description All patients age 5 and above are identified with asthma at the levels:</p> <ol style="list-style-type: none"> intermittent, persistent and well controlled, or persistent and not well-controlled. <p>The patients 5 and over with Persistent Asthma will get an Asthma</p>	

Significant Health Need Identified in 2013 CHNA	Planned Activities Listed in the 2013 Implementation Strategy	Was the Activity Implemented? (Yes/No)	Result or Impact	Supporting Data and Data Sources
			Care Plan and will be cared for by a team consisting of the physician and the nurse.	<p>Program Goal Refer all children diagnosed with asthma to the pulmonologist and assure 24-hour access to the specialist.</p> <p>Action Plan Develop Asthma Care Plan for children age 5 and over with Persistent Asthma and maintain adherence to the Guidelines of the Institute for Clinical System Improvement. Assure 24-hour Attending availability for all Pediatric patients. There is always a Pediatric Attending on the premises. Hospital staff includes a Pediatric Pulmonologist.</p> <p>Outcome CIH ED revisits for asthma, at 1.3%, compares very favorably to the system wide rate of 3.0%.</p>
Asthma	Monitor and Control Asthma Symptoms and Provide Health Information through Pediatric Clinics	Yes		<p>The Pediatric Department holds pediatric pulmonary and allergy clinics, where the Pediatric Asthma Team monitors and controls asthma symptoms and provides health information on methods to reduce exposure to asthma triggers, utilize medications correctly and deal medication side effects.</p> <p>Program Goal Using our CIH Pediatric Asthma Guidelines, actively manage and provide Asthma Care Plans for our target population of persons 5 years old and over with persistent asthma.</p> <p>Action Plan The provider generates an initial Asthma Care Plan and reviews and updates plan as needed at visits where asthma is addressed. The Plan will be reviewed and managed by a Nurse and the plan will be scanned into Quadramed. Patients with asthma will be followed up, at the following minimums: a) Intermittent asthma- every six months b) Persistent well-controlled asthma- every 3 months c) Persistent and not well-controlled asthma- every 6 weeks.</p> <p>Patients can be seen more frequently if needed.</p> <p>Outcome These guidelines are new and data are not available.</p>
Asthma	Develop Individualized Care Plan through Adult Asthma Teams	Yes		<p>Asthma patients are primarily followed in the Ambulatory Care clinics by nurse clinicians, with the difficult cases seen within the Department of Pulmonary Medicine. There are individualized care plans for patients in the form of Asthma Action Plans, which are in Quadramed, and this information is discussed with the patients. Individualized care plans are designed to manage symptoms, reduce triggers and deal with impending attacks effectively. There is no formal Adult Asthma Team, as the Pulmonary nurse clinician and the Primary Care physicians provide the direct clinical care. Patient education is provided during regular office visits to monitor the patient's responses to medication and environmental management goals.</p> <p>Program Goal Provide care with within the Ambulatory Care areas, together with the nurse clinicians and physicians, both in Primary Care and in the Department of Pulmonary Medicine. Note that Project RED was expanded to include Asthma and COPD in June 2013.</p> <p>Action Plan Our nurse clinician interacts with asthma patients regarding education on asthma control, proper use of asthma medications and on teaching the patients the proper delivery technique of the inhaler medications.</p>
Obesity	Refer Obese Pediatric Patients to Weight Loss Program	Yes		<p>Obese pediatric patients are referred to the Hospital's weight loss program, which is operated by our Pediatric Endocrinologist.</p> <p>Program Goal Continue to operate Pediatric Weight Loss Program following the guidelines of the Institute for Clinical Systems Improvement's "Prevention and Management of Obesity for Children and Adolescents."</p> <p>Action Plan Employ a Pediatric Endocrinologist to operate the Pediatric Obesity Clinic. Continue to refer obese patients to our Pediatric Obesity program.</p>

Significant Health Need Identified in 2013 CHNA	Planned Activities Listed in the 2013 Implementation Strategy	Was the Activity Implemented? (Yes/No)	Result or Impact	Supporting Data and Data Sources
			Outcome	Employed Pediatric Endocrinologist and saw significant increase in the number of visits to our Pediatric Obesity Clinic. That clinic has had a 23% increase in visits between FY 2013 and 2015.
Obesity	Provide Patient and Family Counseling through Nutritionist	Yes	Program Description	Patients and their families are counseled by the nutritionist and monitored by the physician. Program Goal Continue and expand our counseling program which is led by our nutritionist. Action Plan Assign obese pediatric patients to care by a Hospital nutritionist. Outcome Nutritionist and dieticians go to local schools for educational purposes. They also are assigned to our Staten Island sites at Mariner's Harbor, Stapleton as well as the new Ida G Israel CHC.
Obesity	Provide Community Health Education and Outreach Programs		Program Description	Raise awareness of accessible preventive and wellness programs to the communities which we serve. Go to local schools and address both the students and staff on relationship issues and on health educational materials and we offer workshops and health screening and on topics, such as diabetes, high blood pressure, cholesterol control, podiatry, and asthma, among others. Many of our health screenings are held at local political offices through the year.
Obesity	Conduct Health Fairs and other Health Educational Programs		Program Goal	Expand our outreach programs within our southern Brooklyn community, using our Dietary and Public Affairs staff. Action Plan 1- Send three outpatient dieticians to local groups and provide community education information 2- Participate in local health fairs and visit local educational sites. The Hospital provides a Farmers Market twice a week between June and November. Health education provided at community organizations Outcome From August 2015 to April 2016: Participated in screenings, such as blood pressure, dental, vision, and hypertension, and provided flu inoculations on 21 occasions. Locations ranged from local elected official offices, the local Police precinct, Kingsborough Community College and local churches. Included in the activities is the Hospital's annual Health Fair, held at our newly opened Ida G Israel CHC. Health Education Seminars were held throughout our service area, including local schools and the local YMCA, among others, on 17 occasions. Presenters at these events included Hospital physicians, dentists, nurses, PA's and dietitians. Topics discussed ranged from breast health, healthy eating, healthy heart, asthma/allergies, strokes and discussions of Hospital services available to participants.

Appendix 4. Community Resources

Appendix 4 is a listing of health and social services available to low-income, uninsured, and underinsured individuals in the neighborhoods included in the primary service area of NYC Health + Hospitals, sorted by borough and neighborhood. Organization services are in the following categories: Dental, Vision, Adult Day Health, Health center, Insurance enrollment, Home Health, Hospital, Nursing Home, Prescription Drug, Immigration Support, Mental Health-Inpatient, Mental Health-Ambulatory, Substance Use, Social Services, Financial Assistance, and Wellness/Prevention.

NYC Health and Hospitals Corporation Community Health Needs Survey

The New York City Health and Hospitals Corporation (HHC) is conducting this survey as part of a community health needs assessment. The information that you provide will help HHC to better serve you and members of your community.

The survey is voluntary and confidential. You do not have to complete the survey, and you can skip questions you do not want to answer. Your name will not be written on the survey, and we will not be able to connect your answers to you personally.

It will take about 15 minutes to complete this survey. In appreciation of your time and effort, you will receive a \$5.50 MetroCard for completing this survey.

1. In general, would you say that your health is:

- Excellent Good Fair Poor

2. Do you currently have health insurance?

- Yes No Don't Know

2a. If yes, what type of insurance do you have?

- Medicaid
 Medicare
 Private insurance through my employer or my spouse's employer
 Private insurance through the NY State Exchange (Obamacare)
 ADAP or other NY State AIDS Insurance Assistance
 Other (please specify) _____

3. Have you seen a personal doctor or your regular doctor in the past 12 months for a visit (for example, for an annual check-up or for a medication refill)?

- Yes No Don't know Prefer not to answer

4. Have you seen a dentist in the past 12 months?

- Yes No Don't know Prefer not to answer

5. Do you have children under the age of 18 living with you?

- Yes No

5a. If yes, are you able to get an appointment with your child's doctor when you need to?

- Always
 Sometimes
 Never

6. Based on your experience with your family, friends, and neighbors, please rate each of the following health issues based on how serious and/or widespread they are ***in your community.***

	Very serious	Somewhat serious	Not serious	Don't know / Not applicable
Heart disease, high cholesterol, stroke				
Cancer				
Diabetes				
Asthma and other breathing issues				
Hypertension/ high blood pressure				
Violence				
Mental illness and psychiatric disorders				
Dementia including Alzheimer's
